

ADVISOR

ADVISOR ENERGY ANALYTICS

Turning data into actionable intelligence

Advisor Energy Analytics empowers management & operations teams with the information they need to make financial and process decisions to reduce costs and increase efficiency, resulting in an average savings of up to 30% with a payback period of only 6 to 12 months.

MEASURE, IDENTIFY AND REDUCE ENERGY USE

Advisor Energy Analytics acquires and analyses energy usage data from energy meters and converts it into management information. Real-time energy data is visualised as easily understood charts, graphs and maps. Users can create targets, Energy Key Performance Indicators, and automated reports to plan, measure and track efficiency

ADVISOR ENERGY ANALYTICS FEATURES

- Cloud-based web application, accessible via all browsers
- Multi-level, multi-site access
- View your data by organisation and site
- Flexible charts with zoom feature

ADVISOR ENERGY ANALYTICS

Turning data into actionable intelligence

ADVISOR ENERGY ANALYTICS FEATURES

Energy Monitoring

- Monitors usage of Electricity, Water, Gas, Oil, Heat, Steam (anything that flows)
- Supports environmental sensors such as temperature and humidity
- Acquires meter data from an array of Industrial Control Systems and AMR systems
- Acquires comparative data from external sources
- Manual data input feature
- Internet of Things (IoT) energy monitoring solutions

Target & Analysis

- Supports monitoring of organisation-specific KPIs
- Top level energy analysis with custom 3D energy maps
- Top level cost analysis with energy cost mapper
- Benchmark setting & targeting

ENERGY MANAGEMENT SYSTEM
